

Use of Andexanet Alfa for Reversal of Factor Xa Inhibitors at GWUH*

*We will only use the “low” dose protocol for all patients: 400 mg over 15 minutes and 480 mg over 2 hours

**Senior or Chief Resident, or Attending to TT one of the approving physicians in order to initiate conversation. Include patient name and MRN.

***Approving/Screening physician to contact the Main Pharmacy at 202-715-5035, to communicate authorization to dispense andexanet. If one of the approving physicians is actually requesting andexanet, another of the approving physicians should will provide approval, and notify Pharmacy.

*****NOTE: Restart anticoagulation within 7 days of reversal if medically appropriate. Holding anticoagulation longer than 7 days is associated with a significant risk of arterial and venous thromboembolic disease.**
